lau@ucsd.edu

OH: Mon 11-12

Man vs. computer (Part 1)

Gotchas when working with functions (demo)

CL03 tips

add_two: How many parameters should this function have?
How can you tell Python to give the function more parameters?

Conditional challenge #1: This only needs one use of "if"

Conditional challenge #2: Take a close look at the first snippet of Part 3...

Operator explorations: Remember to add your comments in a markdown cell (adding one right below the code cell is fine)
