CL06 tips (bit.ly/sam-wi22)

add_student: After writing this function, this code should work:

```
cogs = Cogs18Students()

cogs.add_student('Sam', 1, 2, 3)

cogs.add_student('Suzy', 10, 20, 30)

cogs.students
# [{'PID': 'Sam', 'A1': 1, 'A2': 2, 'E1': 3},
#  {'PID': 'Suzy', 'A1': 10, 'A2': 20, 'E1': 30}]
```

calculate_points: Before starting, make sure add_student works. Then, what should `cogs.calculate_points('Suzy')` return? You'll need to loop through `self.students` for this one.
